

# Prachtsmoothie

## Smoothie Bike

### Usage and Safety Tips

Store out of severe weather. Rain or ice can damage drive system.

Force and stress may damage drive system, obviously. Treat bike gently.

Risk of bike falling over. Do not use without securing the bike on a level surface.

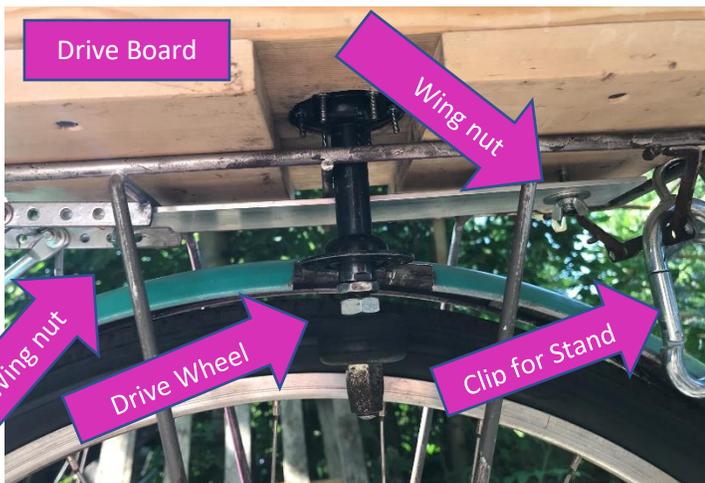

Do not walk into bike stand when it is in travel position.

Keep fingers clear of moving parts – gears, drive shaft, blender.

Drive wheel may be hot after use.

2. Swing the stand down – make sure the stand is stable before making a smoothie
3. Loosen the wing nuts securing the drive board to the luggage rack
4. Slide the drive board right until the wheel on the drive shaft is firmly touching the bike tire
5. Retighten the wing nuts to secure bike
6. Place blender in the hole in the drive board – make sure the teeth in the blender mesh with the pin on top of the drive shaft, push down hard
7. **Secure the blender with the bungee cords**
8. Mount the bike and pedal
9. Pedal until the smoothie is the desired consistency, then carefully detach the blender – unhook bungee cords, twist blender, and pull up
10. Enjoy

\*\*\*The blender blades should turn smoothly. If not, the blender teeth may not have meshed correctly, or the wheel of the drive shaft may not be sufficiently contacting the bike tire

Parts Map

### Running the Smoothie Maker

With all the parts on your smoothie bike, you are ready to make a delicious smoothie. Steps 1-5 are for transitioning bike from mobile to smoothie maker modes.

1. Unhook the carabiners securing the bike stand

**Bike in Smoothie Mode**  
(With wing nuts on top of drive board)

## **Transitioning from Smoothie Maker to Ridable Bike**

1. Loosen the wing nuts securing the drive board to the luggage rack
2. Slide the drive board left until the bike tire is not touching the wheel on the drive shaft
3. Retighten the wing nuts
4. Swing the stand up and secure it with the carabiner – if the stand will not swing, loosen the bolts on the back wheel
5. Tighten the bolts on the back wheel before riding
